

New Duct Sealing Requirements – CA Energy Code (Title 24)

REQUIREMENTS

Beginning October 1, 2005, a home's ducts must be tested for leaks when a central air conditioner or furnace is installed or replaced. Ducts that leak 15 percent or more must be repaired to reduce the leaks. After the contractor tests and fixes the ducts, the homeowner chooses whether to have an approved third-party field verifier check to make sure the duct testing and sealing was done properly or to have the house included in a random sample where one in seven duct systems are checked.

The requirements apply to inland climate zones where there is substantial air conditioning or heating (zones 2, 9, 10, 11, 12, 13, 14, 15 and 16 as defined by the Commission) but do not apply to mild climate coastal regions. The primary zones associated with LA and Orange Counties are 6 through 10. Of these, zones 6 through 8 are exempt from the requirements (see Exemptions, below). **Large parts of LA and Orange Counties reside in zones 6 through 8 and are exempt from the new requirements.** Please refer to the attached map and zone lists to determine if your region has to comply with the new duct sealing requirements

EXEMPTIONS

Duct sealing is not required in the following situations:

- 1) When homes are in specific coastal climates (includes large parts of LA and Orange Counties). See attached map and zone lists for specific details.
- 2) When systems have less than 40 feet of ductwork in unconditioned spaces like attics, garages, crawlspaces, basements or outside the building.
- 3) When ducts are constructed, insulated or sealed with asbestos.

There also are specific alternatives that allow high efficiency equipment and added duct insulation to be installed instead of fixing duct leaks.

THE NEED

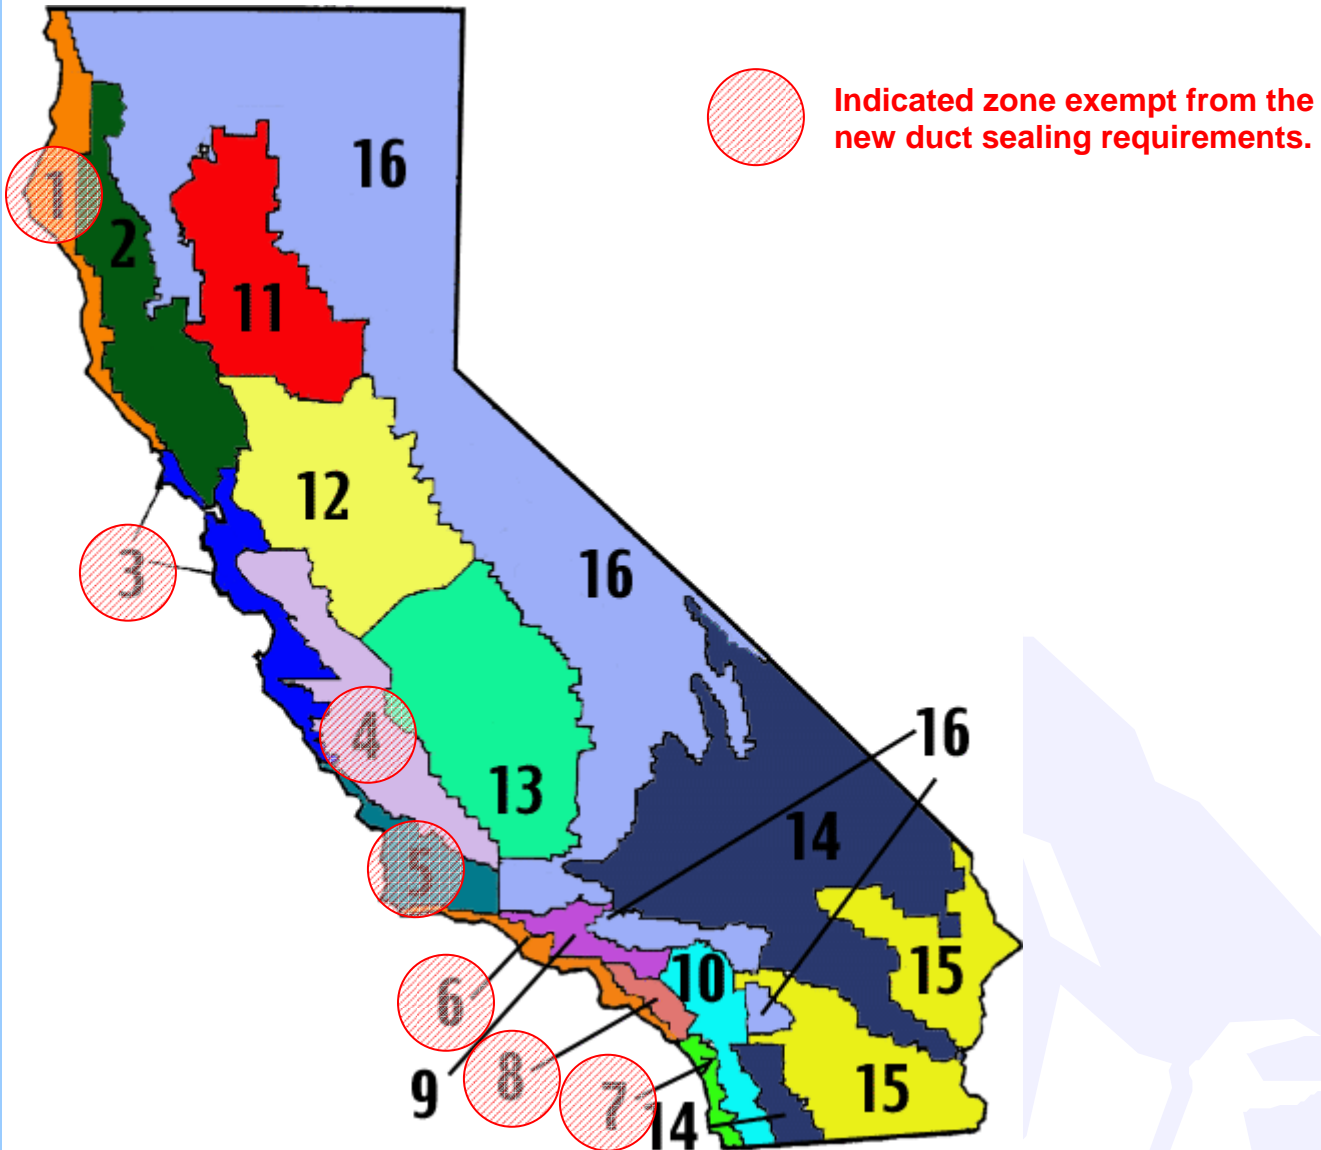

The greatest energy use in California homes is for central air conditioning and heating. Most homes with central air conditioning and heating systems have ducts that were never properly sealed. **The average home's ducts leak around 30 percent of the conditioned air outside the home. These leaks are taking money straight out of your pocketbook.** Properly sealed ducts will lower your energy bills, reduce pollution inside your home, and help to avoid a repeat of the inconvenience and health and safety risks that we suffered during the power blackouts in 2000.

RESOURCES

For more information, please contact the Energy Commission Efficiency Hotline at (800) 772-3300, or visit our website at <http://www.energy.ca.gov/title24/changeout>.

Climate Zone Map and Lists New Duct Sealing Requirements – CA Energy Code (Title 24)

IMPORTANT NOTES

1. These requirements apply only in climate zones 2, 9, 10, 11, 12, 13, 14, 15 and 16 - inland climate zones where there is substantial air conditioning or heating.
2. The requirements don't apply to mild climate regions near the coast.
3. Please visit the Energy Commission Web site http://www.energy.ca.gov/maps/climate_zone_map.html for more information and City lists.

City and Zip code lists for the Southern California climate zones 6 through 10 are provided on the following pages.
